

# Flickering Candle

1. Test all Decorations before plugging into controller
2. Candle has 3 male plugs . Plug Flames into controller .
3. Other plug goes into extension cord.(not included as illustrated below
4. Adjust speed to your preference.

\*\*\* If you plug any of these into the controller and the light does not come on, for example, you plug up Green 1 to Green 1 and the lights do not come on, you need to turn that plug around. Some controllers have a polarity issue. IF the polarity is crossed it will not light. So by turning the prongs around, it will line up the polarity and the lights will come on. We have also placed a dot on the controller plug and a dot on the decoration plug. If you line these dots up, then it will keep the polarity straight

. For the best look, straighten clips. Also, if you live in an area with lots of rain or snow, you may want to take extra precaution to cover your controllers. See our website for ideas on how to protect your controller.
