

ROCKIN ELF INSTRUCTIONS

Please check that you have all parts. (Located in attached bag)

- 2 ground stakes
- 1 wing bolt
- 1 pkg of asst. color clips (replacement)
- 1 black 2 point controller (may be already attached to decoration)

Unfold Rockin Elf being careful not to stretch wiring. Attach two small metal plates together by screwing wing bolt into metal plates to hold up display. Make sure bolt is on opposite side of the nut which is attached. Do not screw bolt into the side with the nut first.

Push ground stake gently into the ground. You can do this with your foot and using a back and forth motion to inch each side gradually into the ground. Rockin Elf will need extra support which is not included. You can do this with an extra stake placed behind the Elf and tied to the frame. These stakes can be wood or metal and can be purchased at your local hardware store.

Plug Elf body with unmarked male plug (non animated part) into an extension cord (not provided).

The two arms are the only parts that plug into the black 2 point controller. Each one is labeled Green 1 and Red 2. *** First plug the controller into an extension cord. Plug the Green 1 into the Green 1 on the controller. Then plug the Red 2 into the Red 2 on the controller. Adjust speed to your liking.

*** Polarization: If you plug any of these into the controller and the light does not come on, for example, you plug up Green 1 to Green 1 and the fire does not come on, you need to turn that plug around. Some controllers have a polarity issue. IF the polarity is crossed it will not light. So by turning the prongs around, it will line up the polarity and the lights will come on. We have also placed a dot on the controller plug and a dot on the decoration plug. If you line these dots up, then it will keep the polarity straight.

For the best look, straighten clips. Also, if you live in an area with lots of rain or snow, you may want to take extra precaution to cover your controllers. See our website for ideas on how to protect your controller.
